The Pipe & Joint System

The Trailer System

### The ideal modular system

MayTec offers a comprehensive, harmonised modular system. All modules can be combined in any way conceivable.

The accessories provide functional and aesthetic solutions for a wide range of applications.

### Service

The MayTec service is as versatile as the MayTec modular system.

You may choose:

- delivery of standard elements ex-factory
- delivery of profiles, pipes and accessories cut to size according to parts list for customer's assembly
- delivery of pre-fitted modular components
- delivery of completely assembled units
- assembly at your premises

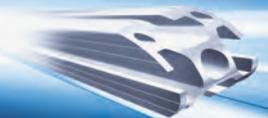

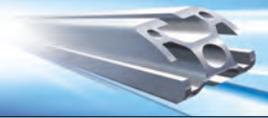

### Implementation

The MayTec modular system is easy to process and quick to assemble. Its flexible and modular construction means it can be easily modified and is reusable at any time.

An experienced team will support you in implementing the MayTec system, tailored to your individual applications, taking into consideration your dimensions, loading capacity and stability.

For the computation of deflection use formulas on this page.

For the computation of deflection by the profiles own weight, apply "Type of load" 3, 6 or 9.

- f = Deflection in mm
- F = Type of load in N
- l = Pipe length in mm
- J<sup>1)</sup> = Moment of inertia in mm<sup>4</sup>
- E = Module of elasticity in N/mm<sup>2</sup>
- E<sub>St</sub> = 210,000 N/mm<sup>2</sup>
- E<sub>V4A</sub> = 200,000 N/mm<sup>2</sup>
- E<sub>AL</sub> = 70,000 N/mm<sup>2</sup>

<sup>1)</sup> Comments

- Catalogue data in cm<sup>4</sup>  
(Note factor of conversion 10<sup>4</sup> !)
- The moments of inertia are given on pages 11.04 and 11.06 under the respective pipes.

Type of load		
1		$f = \frac{F \cdot l^3}{3E \cdot J}$
2		$f = \frac{F \cdot l^3 + F_1 \cdot l_1^2 \cdot l + F_2 \cdot l_2^2 \cdot l}{3E \cdot J}$
3		$f = \frac{F \cdot l^3}{8E \cdot J}$
4		$f = \frac{F \cdot l^3}{48E \cdot J}$
5		$f = \frac{F \cdot l^3}{\left(48 + \frac{29m}{l}\right) \cdot E \cdot J}$
6		$f = \frac{5F \cdot l^3}{384E \cdot J}$
7		$f = \frac{F \cdot a^2 \cdot b^2}{3E \cdot J \cdot l}$
8		$f = \frac{F \cdot l^3}{192E \cdot J}$ <sup>2)</sup>
9		$f = \frac{F \cdot l^3}{384E \cdot J}$

Approximate determination of deflection

To determine the approximation of deflection, use the diagram on this page.

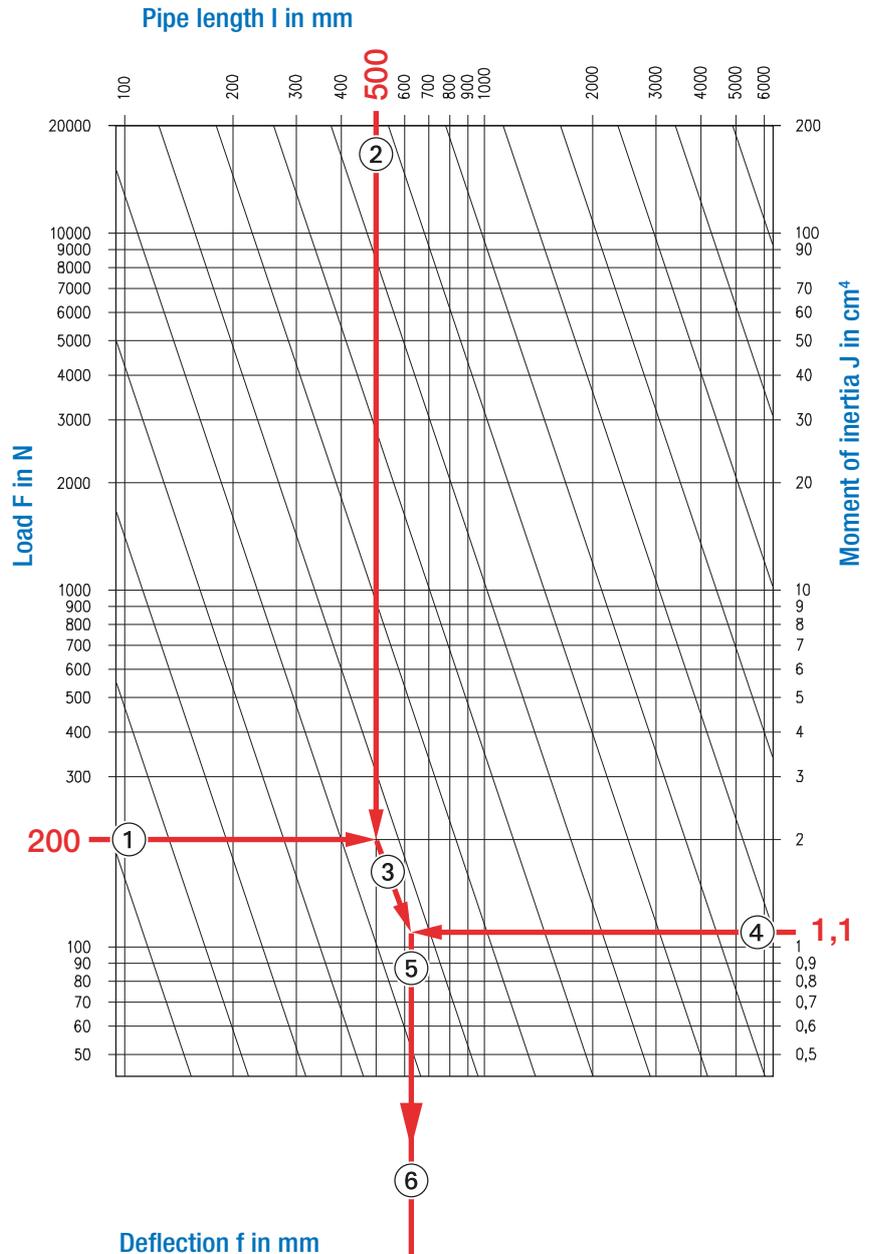

Determination of deflection

1. Type of load F in N
2. Pipe length l in mm
3. Move cross point on the diagonal
4. Moment of inertia of the selected pipe J in cm<sup>4</sup>
5. Cross point with the diagonal to be vertically extended to the bottom
6. Deflection f for the specific "Type of load" in mm

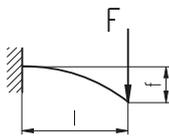

Example: Standard pipe Ø28, 2.0  
(Steel, ABS coated)

- ① F = 200 N
- ② l = 500 mm
- ③ Move cross point on the diagonal
- ④ J = 1.1 cm<sup>4</sup> for Standard pipe Ø28, 2.0
- ⑤ Cross point with the diagonal to be vertically extended to the bottom
- ⑥ Deflection for the specific "Type of load" in mm:

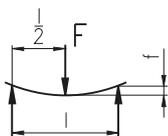

Type of load 1: f = 3,6 mm  
 Type of load 4: f = 0,22 mm  
 Type of load 8: f = 0,56 mm

**Fundamental - Requirements**

What requirements do you have for your application? It is important aspect to know what you require from your castors and wheels. Get to know the most important characteristics, define your requirements and find the right product for your needs.

**Load capacity**

The load capacity per roller is determined by the sum of the weight of the transport device and the maximum payload divided by 3:

$$\frac{\text{Total weight}}{3}$$

**Height**

The height of a castor is described as the total height when installed.

**Wheel diameter**

The larger the diameter, the easier obstacles are overcome.

**Temperature resistance**

Castors and wheels for applications from -40°C to +80°C are available.

**Electrically conductive**

To avoid electrostatic discharge, we offer castors and wheels in electrically conductive design.

**Corrosion resistance**

For castors and wheels used in humid environments or in contact with aggressive substances, TENTE offers versions with durable materials and surfaces.

**Mounting**

- Bolt hole
- Plate

Simple central screw connection  
Plate with multiple screw connection

**Brake**

- Wheel lock
- Directional lock
- Total lock
- Central braking

Prevents the rotation of the wheel  
Fixes the running direction of the movement  
Fixes the rotation and pivotal movement of the wheel  
Simultaneously fixes multiple castors

**Bearing**

- Bearings
- Roller bearing
- Precision ball bearing

Standard bearings, robust, moisture-resistant  
Standard bearings, robust, smooth running  
High performance bearings, for all areas

**Floor contact**

- Soft floors
- Hard floors

Harder wheels recommended  
Softer wheels recommended

**Tread**

- Soft materials
- Hard materials

Lower driving noise, stronger damping, higher protection of the cargo  
Increased driving noise, lower damping, less protection of the cargo

**Wear resistance**

- Flat ground
- Uneven ground

Lower rolling resistance, abrasion and wear  
Higher rolling resistance, abrasion and wear

Load capacity of the roller tracks

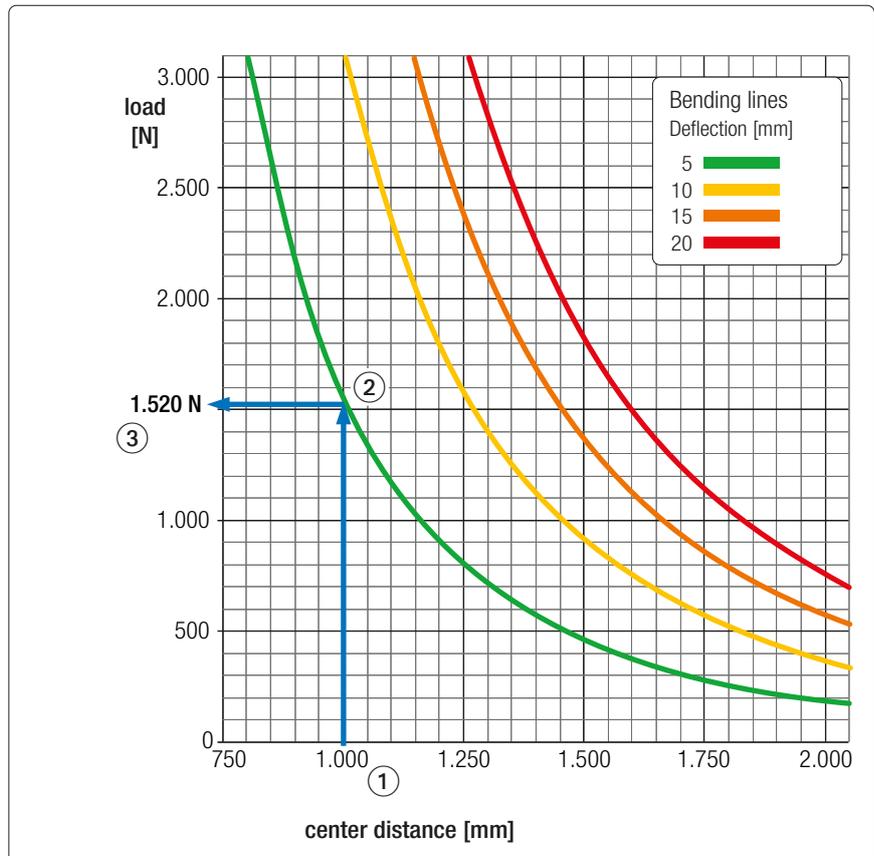

Center distance [mm]	Roller track		
	40	60	85
1,000	1,520	740	2,060
1,250	740	390	1,080

2,000	200	100	270

Load data in N at a deflection of approx. 5 mm

Deflection under line load

Example: Roller track 40

Determination of the load capacity

1. Center distance  $l$  in mm
2. Permitted deflection  $f$  in mm
3. Permitted line load  $F$  in N

Example

- ①  $l = 1,000$  mm
- ②  $f = 5$  mm
- ③  $F = 1,520$  N
